EXPERIMENT – 01

Experiment 1.1 :- Area of Circle

Write a Python program that calculates the area of a circle when the radius is provided by the user. Use π = 3.14 and display the area.

✅ ALGORITHM :-

1. Start
2. Input radius r
3. Set value of π = 3.14
4. Calculate area using formula:
   → area = π × r × r
5. Display the area up to 4 decimal places
6. Stop

1.1.1. Area of Circle

12:21

Write a Python program that calculates the area of a circle when the radius is provided by the user. Use π = 3.14 and display the area.

Input Format:

- A single line containing a floating-point number representing the radius.

Output Format:

- Print the computed area of the circle formatted to 4 decimal places.

Sample Test Cases +

Explorer

circlearea...

Submit

```
#Write your code here...
radius=float(input())

area=3.14 * radius * radius

print(f"{area:.4f}")
```

Debugger
